SUGGESTED PROCEDURE FOR HANDLING DELETIONS TO TARGET LISTINGS

18 Nov. 1957

At the time the plots for a given mission are completed, the OCR Element of HTA will take the following steps:

1 - Record the coordinates of the coverage made good, excluding all cloud covered areas or partially covered areas, etc.

2 - Punch these coordinates into machine tabulating cards (IBM).

3 - Match these IBM cards with the master deck of IBM cards containing low-priority targets (identified in the existing Target Listings as Z-1, Z-2 and Z-3 priority targets)

4 - Matching cards will be listed and copies of this listing will be disseminated to all ARC members for deletion consideration.

5 - At a subsequent ARC meeting these deletions will be discussed. Any targets which are felt must remain in the Target Listings must be justified before the ARC.

6 - A special listing of these deletions will be prepared for the Director of Operations, Project Headquarters to aid in mission planning.
